

Chapter 1 Case Study

To begin, choose a topic for your website: For my case study, I would like to make a website / page that can be attached to my main portfolio. Something impressive, helpful, and useful. I think I would like to make a website page dedicated to beginning cosplayers trying to learn how to begin sewing and need help deciding what their first supply purchase should be. Links to other pages or videos that are useful combined with my own knowledge and skills.

Plan a website containing at least four pages with a common layout and navigation system:

1. Main Page : Home Page
2. Second Page : Sewing tutorials
3. Third Page : (Free to download) sewing templates
4. Fourth Page : suggested resources based off of learning level (beginner, intermediate, advanced)
 - a. Navigation will be a header at the top of each page that is the same and does not change.

This is a PDF file that contains the outline for the beginning of this case study. This file will be updated and changed to adapt to future case studies that expand off of this one. Please view the actual website referencing this case study at <https://devweb1.cis.pennwest.edu/~raf59532/> .
